

# Commercial Resilient Maintenance

Proper care will help protect and maintain the appearance and performance of your flooring. A care program consists of these key areas:

## Dust Mop

The Luxury Vinyl Tile flooring should be dust mopped daily using a flat microfiber dry mop pad.

## Wet Mop

After dry mopping, spray mist the neutral pH cleaner on the floor and use the microfiber wet mop pad for daily cleaning.

**Do not use Mop and Glo, Swiffer, Jet or similar products. Use caution signs when cleaning.**

## Grease Stain Removal

For grease, oil or petroleum stains on the floor, use isopropyl alcohol and a white towel to remove the stain. The alcohol will act as a solvent to break down the stain. Rinse with water after stain removal.

## Deep Cleaning

Dust mop first. Properly dilute the neutral pH floor cleaner into the tank of the scrubber, scrubbing the entire floor space.

**For recommendations on the type of scrubbing pads to use, check maintenance guidelines.**
